

## Recovery and Critical Systems Services

### The disaster has passed, what can be saved?

Whether it is a hurricane, flood or fire, the resources to conduct your business may be damaged. **But do you have to scrap everything and start over?**

The ITC assessment team knows what it is like to walk into a facility that does not even resemble the one you left after any of the following:

- **Water Damage**
- **Fire Smoke Damage**
- **High Humidity—Dew Point**
- **Toxic Contamination**
- **Electro Static Discharge Damage**

Our Critical Incident Manager can recommend options tailored specifically for your company. ITC's expertise includes water restoration, fire and smoke damage clean-up, following OSHA guidelines plus electrical, mechanical and structural systems. We focus on salvaging valuable hardware, identifying hidden risks, preventing secondary disasters and expediting the resumption of your business operations.

The ITC Team works on all brands and models of electronic equipment. We provide service on robotics and industrial equipment too.

When it comes to IT Disaster Recovery, ITC works from the ground up to create a risk management program that's customized specifically to your organization's needs. In addition to asset risk services, we provide our clients with a Disaster Recovery Plan that's designed to get businesses up and running again, as quickly as possible. Our Risk Management experts know the processes involved with not only analyzing your business risk, but developing a Risk Management Plan that works – one that minimizes your corporate risk.

Let ITC's experienced risk management consultants help your business get back to business - fast.

ITC is your Total Protection Solutions Provider.
